SITE OVERVIEW

Land Use

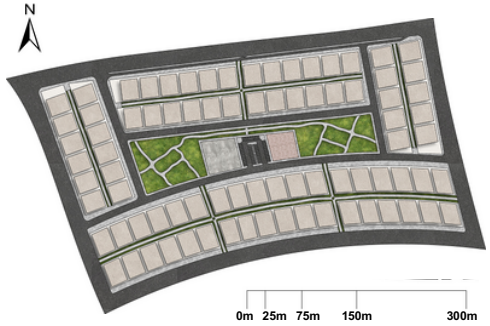

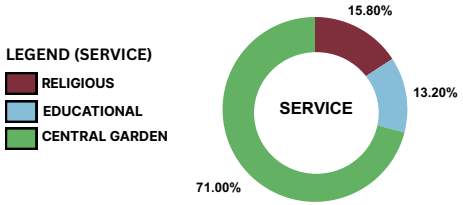

The land-use layout shows the distribution of residential blocks, services, streets, and open spaces, forming a balanced and accessible neighborhood structure.

TYPE	PERCENTAGE	AREA (HA)	AREA (METER^2)
RESIDENTIAL	59%	9.5	95000
SERVICE	15%	2.4	24000
STREETS	16%	2.6	26000
OPEN SPACES	10%	1.6	16000
TOTAL SITE SPACE	100%	16	160000

Site Plan

The site plan illustrates the overall organization of buildings, streets, services, and open spaces, defining the spatial structure of the neighborhood and ensuring clear access

Description	Count
Site Area (hectares)	16
Density(persons/hectare)	300
Total Population	4800
Average Household Size	5
Number of Families	960
Required Housing Units	960
Number of Floors	6
Units per Floor	4
Unit Type	Apartment
Building Footprint (m²) Unit	800
Area (m²)	200

Standards

TYPE	PERCENTAGE	AREA (HA)	AREA (M^2)
RESIDENTIAL	55% - 65%	8.25 - 19.5	82500 - 195000
SERVICE	12% - 22%	1.8 - 6.6	18500 - 66000
OPEN SPACE	5% - 15%	0.75 - 4.5	7500 - 45000
ROAD	9% - 17%	1.35 - 5.1	13500 - 51000
TOTAL	100%	15 - 30	150000 - 300000

PLANNING CRITERIA	POPULATION STANDARD	Service Area	Walking Distance
MOSQUE	1500 - 4000	750 - 2800	150 - 300
KINDERGARDEN	200 - 3000	900 - 3600	150 - 250
ELEMENTARY SCHOOL	3200 - 4000	3600 - 6800	400 - 600
NEIGHBOURHOOD PARK	3000 - 5000	6000-15000	150 - 300

ROAD TYPE	ROAD WIDTH (M)	LANES WIDTH (M)
ARTERIAL	40+	3.65
COLLECTOR	24-40	3.65
LOCAL	13-24	3.5

TYPE	PERCENTAGE	AREA (HA)	AREA (METER
RELIGOUS	15.8%	0.3	3000
Educational	13.2%	0.25	2500
Central Garden	71%	1.35	13500
Total Service	100%	1.9	19000

SITE OVERVIEW

ROAD NETWORK

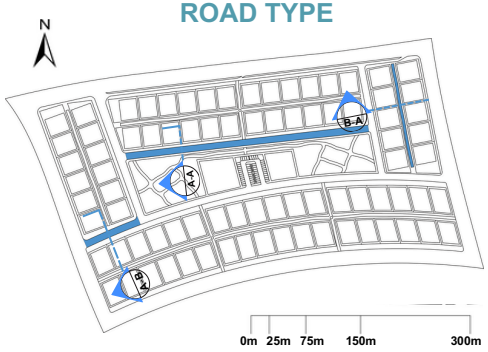

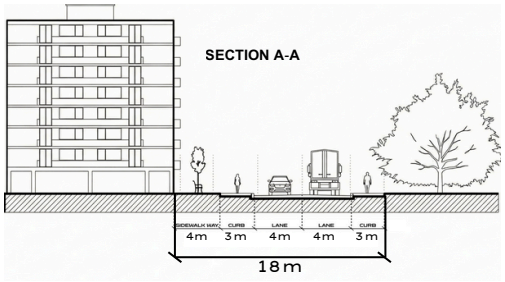

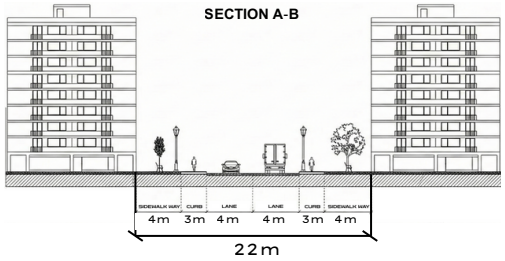

The road network is organized to support the site's pedestrian-first structure and reinforce the central green spine. A perimeter loop handles most vehicular movement, keeping cars at the edges while preserving a calm internal environment. Collector streets provide primary access to the residential blocks, while smaller local roads serve short, low-traffic connections. This hierarchy ensures efficient circulation, clear service access, and smooth transitions between housing clusters and the central open-space system. Overall, the layout maintains movement efficiency without compromising the walkable character of the site.

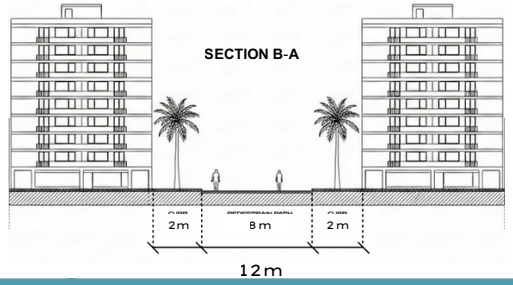

Road Type	Width	Lanes
Collector	25 m	4
Local (A)	8 m	2
Local (B)	4 m	1

ROAD TYPE

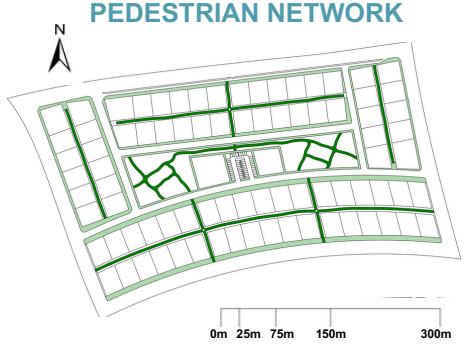

PEDESTRIAN NETWORK

LEGEND (PEDESTRIAN NETWORK)

PRIMARY PEDESTRIAN

SECONDARY PEDESTRIAN

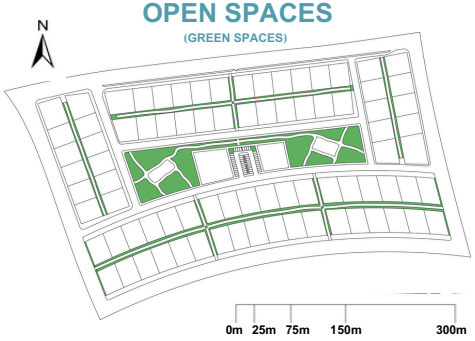

The pedestrian network is designed to strengthen walkability and maintain a safe, comfortable movement system within the site. A continuous primary pedestrian route links major activity points, including residential clusters and shared community spaces, ensuring direct connectivity for daily use.

Secondary walkways loop around the housing and service areas, collecting local pedestrian flows and guiding them smoothly toward the main routes. Together, this hierarchy supports a calm, car-free internal environment, encourages active mobility.

OPEN SPACES

(GREEN SPACES)

OPEN SPACES WITHIN URBAN CORRDIOR

SITE OVERVIEW

Park with Colorful High Background

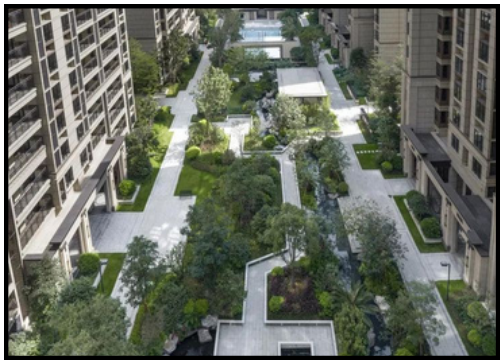

Country: Türkiye
City: Istanbul
Area / District: Kağıthane – Vadi Istanbul zone, characterized by dense mixed-use residential towers

The towers are positioned within the rear urban corridor, forming a distinct backdrop to the neighborhood's central park. Their placement establishes a clear transition from the open public space in front to the higher built form behind it. This configuration strengthens the park's urban character, provides the residential density needed to sustain daily activity, and reinforces a clear spatial hierarchy between the central open space and the vertical edge of the block.

Courtyard Between Buildings

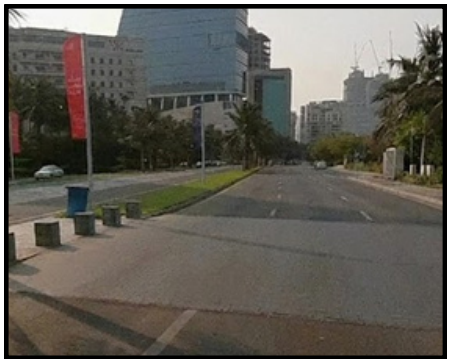

Country: China
City: Hangzhou
Area / District: Contemporary residential compounds developed by Vanke / Greentown / Poly featuring central courtyard landscapes

The corridor runs along the rear side of the residential buildings, forming an internal spine that links entrances and shared outdoor spaces. As a primary pedestrian route separated from vehicle movement, it offers a safe and quiet environment for daily use.
Landscape elements such as shade trees and low shrubs define the walkway, softening the surrounding building mass and creating a comfortable, well-structured urban space.

Speed Table

Country: Saudi Arabia
City: Jeddah
Area / District: Jeddah Corniche – Waterfront Zone

The table speed hump is a raised, flat-topped platform built across the full width of the road to slow vehicles while allowing smooth pedestrian crossing. Its gentle ramps and level surface reduce speed without causing harsh impact, and when integrated with adjacent sidewalks—as seen on the Jeddah Corniche—it creates a continuous crossing zone that prioritizes pedestrian safety and the overall experience.

Maskan Al-Ghuroob

Country: Saudi Arabia
City: Madinah
Area / District: Maskan Al-Ghuroob – Approved residential community under the Sakani off-plan development program

The layout presents a residential district organized into curved rows that follow the street geometry, with back-to-back housing blocks that maximize land efficiency and create a cohesive urban fabric. Small green pockets are positioned at key intersections to soften the built form, while a central service area anchors the neighborhood and acts as a shared hub connecting movement and activity. The design is clear, controlled, and balances density with accessibility.
